DETAILED ACTION

Withdrawal of Finality of Last Office Action

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Specification

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 2 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Igarashi et al., hereinafter Igarashi (US Patent 5,990,546), previously cited.

Igarashi discloses in figure 5(B), a semiconductor device that comprises a substrate 2 and a semiconductor element 1 mounted thereon through a bump bonding part (the ball pads shown in the figure), wherein

the semiconductor element has been encapsulated by coating the back and the edges of the semiconductor element with a thermosetting, rubber containing sheet material having tackiness (see col. 7, lines 21 and 22).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Igarashi.

Igarashi discloses the claimed invention, as discussed above, except for explicitly disclosing the tackiness of the sheet material is 2 to 15 in terms of ball tack. However, it would have been obvious to one of ordinary skill in the art at the time of the invention to adjust the tackiness of the sheet material to a certain amount in terms of ball tack in accordance with the process of forming the sheet material that a person with ordinary skill in the art selects to form the sheet material, and also to adjust the flexibility in adhesiveness of the sheet material, for the purposes of handling the chip package during or after of the packaging process, further for the purpose of, for example, testing the chip in the package in various steps of the packaging process. See, also, *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980) for the proposition that it has been held that discovering an optimum value of a result effective variable involves routine skill in the art.

Response to Arguments

7. Applicant's arguments with respect to the previously rejected claims, claims 1, 6 and 7, have been considered but are moot in view of the new grounds of rejection.
